

AccessPoint MD™ Medication Delivery Workstation

The AccessPoint MD™ medication delivery workstation is designed to help you close the loop of medication delivery between the pharmacy and the patient bedside, reduce errors and avoid common workarounds.

- Increase accuracy of real-time bedside medication administration.
- Streamline BCMA process with barcode patient identification and direct eMAR API access.
- Eliminate time-consuming and error-prone manual drawer labeling with the ADT interface.
- Keep medication secure and reduce the risk of administering medications at an incorrect time with time-based access controls.
- Provides scalable and centralized software architecture and integration to grow with your changing needs.
- Multiple accessories available, [contact us](#) for details.

Features

- Multiple configuration options with up to 12 individually locking bins and drawers
- Microban® antimicrobial additives infused into surface materials
- BCMA compliance
- Multiple power system options
- Universal & expandable technology tray
- Battery-only replacement option
- Fully adjustable display mount
- Electric lift option
