

medDispense® E series Access Control

The medDispense® E series interactive wireless latch and software is a system comprising of a wireless latch with RFID reader and E-Paper display that can be retrofitted to your existing cabinet door. Wirelessly connecting to the management server for easy reporting, system management, and user management.

- Access control with badge access, eliminating the need for keys and identifying the user accessing the lock.
- Enjoy user management for controlled cabinet access, alerts for open doors, and traceability of cabinet access--all wirelessly connected for seamless functionality.
- Why TouchPoint Medical E series:
 - Creates an audit trail for access to secured cabinets
 - No keys to lose or share allows nurses to spend more time with patients and less time looking for the keys
- Software based system that enables auditing, reporting, tracking compliance and more

Features

- The electronic lock can be install on existing cabinet/cupboards and be used as an aux to a TouchPoint Medical medDispense cabinet.
- Badge access to get in, eliminating keys and providing more traceability.
- Browser based user management to control who can access each cabinet.
- Traceability to who has been in a cabinet via reports.
- Audible alert for doors left open.
- All wirelessly connected.
